- Confirmatory Factor Analysis: Validating measurement models.

- Latent Variable Modeling: Handling unobserved constructs.
- Multi-group Analysis: Comparing models across different groups.
- Longitudinal Data Analysis: Assessing changes over time.

The software employs maximum likelihood estimation as its core estimation method but also supports alternative approaches like Bayesian estimation, depending on user needs.

Model Fit Evaluation and Diagnostics

Assessing the adequacy of a model is crucial. Amos provides multiple fit indices, including:

- Chi-square test
- Comparative Fit Index (CFI)
- Tucker-Lewis Index (TLI)
- Root Mean Square Error of Approximation (RMSEA)
- Standardized Root Mean Square Residual (SRMR)

These indices help researchers determine how well their models fit the data and guide necessary modifications.

Data Handling and Integration

Amos seamlessly integrates with SPSS data files (.sav), allowing users to import datasets directly for analysis. It supports data management features such as:

- Handling missing data through various imputation techniques.
- Data transformation and recoding.
- Multiple dataset comparisons.

Output and Reporting

The software generates comprehensive output reports, including:

- Path diagrams with standardized coefficients.
- Summary tables of parameter estimates.
- Fit indices and diagnostics.
- Modification indices for model refinement.
- Graphical and tabular representations suitable for publication.
