Common Techniques:

- Discounted Cash Flow (DCF) Analysis
- Capitalization of Earnings

Features:

- Focuses on the company's ability to generate cash

Common Techniques:

- Comparable Company Analysis (Comps)
- Precedent Transactions Analysis

Features:

- Based on real market data
- Uses valuation multiples like P/E, EV/EBITDA, or Price/Sales

Pros:

- Relatively straightforward
- Reflects current market sentiments

Cons:

- Finding truly comparable companies can be challenging
- Market conditions at the time of comparison influence results

3. Asset-Based Approach

This approach values a company based on the net asset value, often used for asset-heavy or liquidation scenarios.

Features:

- Sum of the company's assets minus liabilities
- Adjustments for asset impairments or fair value

Pros:

- Useful for companies with significant tangible assets
- Suitable for liquidation valuations

Cons:

- Less relevant for service or technology firms
- Ignores intangible assets like brand or intellectual property
