Sample Multiple Choice Questions and Explanations

Below are some representative MCQs with detailed explanations to help understand the approach to solving them.

Question 1:

Which of the following statements about Coulomb's law is correct?

- a) Coulomb's law is valid only for point charges.
- b) Coulomb's law states that the force between two charges is directly proportional to the product of the charges.
- c) Coulomb's law applies in free space and isotropic media.
- d) Both b and c are correct.

Answer: d) Both b and c are correct.

Explanation:

Coulomb's law states that the electrostatic force between two point charges is proportional to the product of the magnitudes of the charges and inversely proportional to the square of the distance between them. It is valid in free space and isotropic media. The law is specifically applicable to point charges but can be extended to continuous charge distributions under certain conditions.

Question 2:

The electric flux through a closed surface is zero when:

- a) There is no electric field inside the surface.

- b) The net electric charge enclosed is zero.
- c) The electric field is uniform inside the surface.
- d) The surface encloses a positive charge only.

Answer: b) The net electric charge enclosed is zero.

Explanation:

According to Gauss's law, the electric flux through a closed surface is proportional to the net charge enclosed. When the net enclosed charge is zero, the total flux is zero, regardless of the electric field's presence elsewhere.

Question 3:

Which law relates the magnetic field around a current-carrying conductor to the current?

- a) Gauss's law for magnetism
- b) Biot-Savart law
- c) Faraday's law of induction
- d) Ampere's law

Answer: d) Ampere's law

Explanation:

Ampere's law states that the magnetic field around a current-carrying conductor is proportional to the current and can be calculated using the line integral of the magnetic field. The Biot-Savart law also relates current to magnetic field but is more general and used for calculating fields due to various current distributions.
