Overview of Apollo 13

Apollo 13 was the seventh crewed mission in NASA's Apollo program, launched on April 11, 1970. Its primary goal was to explore the Fra Mauro formation on the Moon. However, an oxygen tank explosion two days into the mission drastically altered its course, turning it from a lunar landing attempt into a critical survival story.

The crew members included Commander James A. Lovell, Command Module Pilot John L. Swigert, and Lunar Module Pilot Fred W. Haise. The explosion caused a series of life-threatening problems, including loss of electrical power, a crippled oxygen system, and limited consumables, which challenged the crew and ground control to develop innovative solutions rapidly.

Key Questions and Answers about Apollo 13

1. What caused the Apollo 13 accident?

The accident was caused by an oxygen tank explosion in the service module. The tank contained oxygen at high pressure, and a combination of electrical issues and a thermostat switch design flaw led to the tank overheating during pre-flight checks. The explosion occurred when the spacecraft was in transit to the Moon, causing significant damage to the spacecraft's systems.

2. How did the explosion affect the spacecraft's systems?

The explosion resulted in:

- Loss of electrical power
- Damage to the service module
- Loss of oxygen for life support and propulsion
- Limited ability to generate power and maintain environmental controls
- The crew's life was endangered due to these failures, requiring immediate troubleshooting and ingenuity to survive.

3. What were the main objectives of the Apollo 13 mission before the accident?

Originally, Apollo 13 aimed to:

- Land on the Moon's Fra Mauro formation
- Collect lunar samples
- Conduct scientific experiments
- Test lunar landing procedures and equipment

The mission was part of NASA's broader goal of lunar exploration and pushing the boundaries of human spaceflight.

4. How did NASA and the crew respond to the crisis?

The response involved:

- Rapid assessment of damage and system failures
- Creative use of remaining spacecraft resources
- Ground control and crew working together to develop solutions
- Using the Lunar Module as a "lifeboat" to sustain the crew
- Making critical adjustments to conserve power and oxygen
- Carefully planning re-entry procedures for safe return

5. What role did the Lunar Module play during the emergency?

The Lunar Module (LM), originally intended for landing, was repurposed as a "lifeboat" to:

- Provide life support and propulsion

- Serve as a habitat for the crew during the return journey
- Enable power conservation by shutting down non-essential systems
- Help in scrubbing carbon dioxide from the air using improvised fixes

6. What was the famous phrase related to Apollo 13's crisis?

The phrase "Houston, we have a problem" became iconic, symbolizing the severity of the situation and the effective communication between the crew and ground control. Interestingly, the original quote was "Houston, we've had a problem," but the latter is more widely recognized.

7. How did NASA engineers solve the carbon dioxide problem?

The Lunar Module's life-support system used square carbon dioxide scrubbers, while the Command Module had round ones. The engineers devised a makeshift adapter using:

- Plastic bags
- cardboard
- duct tape
- other materials to fit the square canisters into the round holes

This resourceful fix was critical to keep the crew alive during their return trip.

8. How was the re-entry into Earth's atmosphere managed safely?

The crew and ground team meticulously calculated the re-entry procedures, considering:

- The spacecraft's altered trajectory
- Limited power and navigation systems
- Manual adjustments to the spacecraft's orientation
- Using the remaining fuel and thrusters efficiently

This precision ensured a safe splashdown in the Pacific Ocean on April 17, 1970.
