Sample Questions and Solutions from the June 2013 Edexcel Mathematics C4 Paper

Question 1: Differentiation of a Polynomial Function

Example:

Find the derivative of $f(x) = 3x^4 - 5x^2 + 2x - 7$.

Solution:

Apply the power rule to each term:

$\frac{d}{dx}$

$$f'(x) = 12x^3 - 10x + 2$$

$\frac{d}{dx}$

This straightforward differentiation checks understanding of basic rules and sets the foundation for more complex problems.

Question 4: Integration and Area Calculation

Example:

Calculate the area under the curve $y = x^3 - 3x$ between $x = 0$ and $x = 2$.

Solution:

Set up the definite integral:

\[

$$\text{Area} = \int_0^2 (x^3 - 3x) \, dx$$

\]

Compute the integral:

\[

$$\int x^3 \, dx = \frac{x^4}{4}$$

\]

\[

$$\int 3x \, dx = \frac{3x^2}{2}$$

\]

Evaluate at bounds:

\[

$$\left[\frac{x^4}{4} - \frac{3x^2}{2} \right]_0^2 = \left(\frac{16}{4} - \frac{3 \times 4}{2} \right) - (0 - 0) = (4 - 6) = -2$$

\]

Since area cannot be negative, the absolute value gives 2. So, the area between the curve and the x-axis over the interval is 2.
