Thermal to Mechanical

Heat engines, including steam turbines and Stirling engines, transform thermal energy into

mechanical work. This process is fundamental in power plants, where heat from burning fuel or nuclear reactions drives turbines.

Electrical to Light and Heat

Incandescent bulbs and LEDs convert electrical energy into light, while resistive heaters turn electrical energy into heat. These examples highlight the direct conversion of electrical energy into other useful forms.

Radiant to Chemical

Photosynthesis is a natural example where radiant energy from sunlight is converted into chemical energy within plants, forming the basis of most life on Earth.

Applications of Energy Conversion in Real Life
