- No involvement of gametes
- Rapid population increase
- Offspring are clones of the parent
- Examples: binary fission in bacteria, budding in yeast and hydra, vegetative propagation in plants

Sexual Reproduction

Sexual reproduction involves the fusion of male and female gametes to form a zygote. Characteristics include:

- Genetic variation among offspring

- Requires specialized reproductive organs
- Involves meiosis and fertilization
- Examples: human reproduction, reproduction in flowering plants, reproduction in amphibians

Key Terms in Reproduction

Understanding fundamental terminology is crucial for mastering the topic. Here are some essential terms with their definitions:

- Gametes: Reproductive cells (sperm and egg)
- Fertilization: The process of sperm and egg fusion
- Zygote: The fertilized egg resulting from the union of gametes
