Fundamental Concepts in Reactor Analysis

Reactor analysis involves understanding how reaction kinetics, mass transfer, heat transfer, and fluid dynamics influence reactor performance. These components are interconnected:

Reaction Kinetics: Defines the rate at which reactions proceed, depending on temperature, concentration, catalysts, and other factors.

Mass Transfer: Concerns the movement of reactants and products within the reactor, impacting

overall reaction rates.

Heat Transfer: Manages the temperature within the reactor, crucial for controlling reaction rates and preventing runaway reactions.

Fluid Dynamics: Describes the flow patterns of reactants, influencing residence time and mixing efficiency.

Types of Chemical Reactors

Reactor types are broadly classified based on their operation mode and internal configuration:

1. Batch Reactors
