Explain the role of enzymes in biological reactions according to Form 4 syllabus. Enzymes are biological catalysts that speed up chemical reactions in living organisms by lowering the activation energy. They are specific to substrates and are not consumed in the reactions, facilitating processes like digestion, respiration, and photosynthesis. What is the significance of the cell membrane as discussed in Form 4 Biology Paper 3? The cell membrane controls the movement of substances in and out of the cell, provides protection and support, and

maintains the cell's internal environment. It is selectively permeable, allowing only certain molecules to pass through. Describe the process of respiration in humans as covered in Form 4 Biology Paper 3. Human respiration involves the intake of oxygen and release of carbon dioxide. It occurs in the lungs where oxygen diffuses into the blood and carbon dioxide diffuses out. The process includes glycolysis, the Krebs cycle, and oxidative phosphorylation, producing energy in the form of ATP. What are the functions of the circulatory system as outlined in Form 4 Biology Paper 3? The circulatory system transports nutrients, gases (oxygen and carbon dioxide), hormones, and waste products throughout the body. It also helps in temperature regulation and immune responses. Define osmosis and describe its importance in biological systems based on Form 4 syllabus. Osmosis is the movement of water molecules from a region of lower solute concentration to a region of higher solute concentration across a semi-permeable membrane. It is vital for cell turgor, nutrient absorption, and waste removal. What are the differences between monocots and dicots as discussed in Form 4 Biology Paper 3? Monocots have one cotyledon, parallel leaf venation, scattered vascular bundles, and fibrous roots. Dicots have two cotyledons, reticulate leaf venation, vascular bundles arranged in rings, and tap roots. Explain the importance of biodiversity as covered in Form 4 Biology Paper 3 questions. Biodiversity is important for ecosystem stability, genetic variation, and providing resources such as food, medicine, and raw materials. It also helps in ecological balance and resilience against environmental changes. Describe the process of genetic inheritance as outlined in Form 4 Biology Paper 3. Genetic inheritance involves the transmission of genetic traits from parents to offspring through genes. It follows Mendelian principles, where dominant and recessive alleles determine traits, and involves processes like meiosis and fertilization to produce genetically unique offspring.
