Creating graphical user interfaces (GUIs) in MATLAB provides a powerful way to develop interactive applications, tools, and visualizations that are accessible to users who may not be familiar with programming intricacies. MATLAB's GUI capabilities enable users to design custom interfaces with buttons, sliders, text fields, and other interactive components, simplifying complex data analysis and visualization tasks. This tutorial aims to guide you through the essentials of developing GUIs in MATLAB, from basic concepts to advanced techniques, ensuring you can effectively create, customize, and deploy your own applications.

Understanding MATLAB GUI Development

What is a MATLAB GUI?

A MATLAB GUI is a window-based interface that allows users to interact with MATLAB programs visually. It typically contains various controls such as buttons, sliders, checkboxes, and text displays that trigger specific functions or display information dynamically. GUIs in MATLAB can be created programmatically or using dedicated tools like GUIDE or App Designer.

Methods to Create MATLAB GUIs

There are primarily three methods to develop GUIs in MATLAB:

- **Programmatic Approach:** Manually coding the GUI components using MATLAB commands and functions.
- **GUIDE (Graphical User Interface Development Environment):** A legacy visual tool for designing GUIs with drag-and-drop components.
- **App Designer:** A modern, feature-rich environment for designing professional apps with an integrated code view.

While GUIDE is deprecated as of MATLAB R2020b, it is still available, but MathWorks recommends using App Designer for new projects due to its advanced capabilities and better integration.

Creating a Basic GUI Programmatically

Step 1: Initialize the Figure

The first step in creating a GUI programmatically is to create a figure window that will serve as the main container for your interface.

```
``matlab

fig = figure('Name', 'My First GUI', 'NumberTitle', 'Off', ...

'Position', [100, 100, 400, 300]);

...
```

This command creates a window titled "My First GUI" with specified size and position.

Step 2: Add UI Controls

Next, add controls such as buttons, sliders, or text fields. For example, to add a pushbutton:

```
```matlab

btn = uicontrol('Style', 'pushbutton', 'String', 'Click Me', ...

'Position', [150, 200, 100, 40]);

```
```

Step 3: Define Callback Functions

Callback functions specify what happens when a control is interacted with. For example, assign a callback to the button:

```
```matlab

set(btn, 'Callback', @buttonCallback);

function buttonCallback(~, ~)

disp('Button was clicked!');

end

```
```

This simple example displays a message in the command window when the button is clicked.

Complete Example: Basic GUI with Button and Text

```
```matlab

function simpleGUI()

fig = figure('Name', 'Simple GUI', 'NumberTitle', 'Off', ...

'Position', [100, 100, 400, 200]);

txt = uicontrol('Style', 'text', 'String', 'Press the button:', ...

'Position', [150, 130, 100, 20]);

```
```

```
btn = uicontrol('Style', 'pushbutton', 'String', 'Click Me', ...  
  
'Position', [150, 80, 100, 40], ...  
  
'Callback', @onButtonClick);  
  
function onButtonClick(~, ~)  
  
set(txt, 'String', 'Button was pressed!');  
  
end  
  
end  
  
...
```

Running this code creates a simple GUI where clicking the button updates the text.

Using GUIDE for GUI Development

Overview of GUIDE

GUIDE provides a drag-and-drop interface for designing GUIs visually, which is especially helpful for users unfamiliar with programmatic GUI creation. It generates code that can be modified to add custom functionality.

Steps to Create a GUI with GUIDE

- Open GUIDE: Type `guide` in the MATLAB command window.
- Create a new GUI: Choose "Blank GUI (Default)".
- Use the Toolbox to drag and drop UI components onto the canvas.
- Configure properties: Set tags, labels, and other properties via the Property Inspector.
- Save the GUI: Save your project, which generates two files: `.fig` and `.m`.
- Implement callbacks: Edit the generated `.m` file to define behavior for controls.

Example: Simple Button Callback in GUIDE

Suppose you have a button with tag `pushbutton1`. To define what happens when clicked:

```
```matlab
```

```
function pushbutton1_Callback(hObject, eventdata, handles)

msgbox('Button clicked!');

end

%%
```

## Using MATLAB App Designer

### Introduction to App Designer

App Designer offers an integrated environment for designing apps with modern UI components, layout tools, and code editing capabilities. It uses a drag-and-drop interface similar to GUIDE but with more advanced features and better support for complex applications.

### Creating an App in App Designer

- Open App Designer: Type `appdesigner` in MATLAB.
- Select "New App": Choose a blank app or templates.
- Design the layout: Drag components like buttons, sliders, labels, and axes onto the canvas.
- Configure properties: Set component properties via the Component Browser.
- Write callback functions: Use the Code View to program behavior for each component.
- Run and test the app: Click the "Run" button to test the application live.

### Example: Button Callback in App Designer

In App Designer, the callback might look like this:

```
%%matlab

methods (Access = private)

function ButtonPushed(app, event)

app.Label.Text = 'Button was pressed!';

end

end
```

...

This updates a label when a button is clicked.

## Best Practices for MATLAB GUI Development

### Organize Your Code

- Separate UI layout code from callback functions.
- Use descriptive tags for controls to easily reference them.
- Modularize code by defining callback functions separately.

### Design User-Friendly Interfaces

- Keep layouts clean and intuitive.
- Use clear labels and instructions.
- Limit the number of controls to avoid clutter.

### Ensure Compatibility and Responsiveness

- Design GUIs that adapt to different screen sizes.
- Test across MATLAB versions if necessary.
- Use callbacks efficiently to avoid lag or unresponsiveness.

## Advanced Techniques in MATLAB GUI Development

### Adding Dynamic Components

Use code to add components at runtime for flexible interfaces. For example:

```
```matlab
```

```
uicontrol('Style', 'slider', 'Min', 0, 'Max', 100, ...
```

```
'Position', [50, 50, 300, 20], ...
```

```
'Callback', @sliderCallback);
```

...

Data Visualization Integration

Embed plots within GUIs using axes components:

```
```matlab  

ax = axes('Parent', fig, 'Position', [0.55, 0.3, 0.4, 0.6]);

plot(ax, rand(10,1));

```
```

...

Handling Multiple Callbacks and State

Maintain internal state using `guidata` or properties in App Designer to coordinate complex interactions.

Deploying MATLAB GUIs

Sharing with Others

- Package GUIs as MATLAB apps using App Designer.
- Compile as standalone applications using MATLAB Compiler.
- Share source code with instructions for execution.

Creating Standalone Applications

Use MATLAB Compiler SDK to convert GUIs into executables or web apps, enabling users without MATLAB to run your applications.

Conclusion

MATLAB GUI development offers a versatile platform for creating interactive, user-friendly applications tailored to a variety of data analysis, visualization, and computational needs. Whether you choose programmatic methods, GUIDE, or App Designer, understanding the fundamental principles, best practices, and advanced techniques will empower you to build robust GUIs. As MATLAB continues to evolve, leveraging the latest tools like App Designer ensures your applications are modern, adaptable, and accessible. Practice by starting with simple interfaces and

progressively incorporating more features, ultimately developing professional-grade applications that enhance your workflows and share your work with others effectively.

Tutorial MATLAB GUI: A Comprehensive Guide for Beginners and Enthusiasts

In the rapidly evolving landscape of engineering, data analysis, and scientific research, MATLAB remains a cornerstone tool for professionals and students alike. Its powerful computational capabilities are complemented by an intuitive feature: the Graphical User Interface (GUI). If you're looking to enhance your MATLAB projects with user-friendly interfaces, understanding how to craft a MATLAB GUI is essential. This tutorial MATLAB GUI guide aims to demystify the process, offering a clear, detailed pathway from basic concepts to creating functional, professional interfaces.

What is MATLAB GUI?

Before diving into the "how," it's crucial to understand the "what." A MATLAB GUI provides an interactive platform within MATLAB that allows users to operate programs more comfortably. Instead of relying solely on command-line scripts, GUIs enable visual interaction through buttons, sliders, text boxes, and other UI components.

Why Use MATLAB GUI?

- Enhanced User Experience: GUIs make complex calculations and data visualization accessible to non-programmers.
- Efficiency: Users can input parameters, trigger computations, and view results seamlessly.
- Professional Presentation: Well-designed GUIs elevate your MATLAB applications, making them suitable for presentations or deployment.

Building Blocks of MATLAB GUI

Creating a GUI in MATLAB involves understanding its core components:

- UI Components

These are the elements users interact with, such as:

- Push buttons
- Sliders
- Text boxes

- Drop-down menus
- Axes for plotting

- Callbacks

Callbacks are functions executed when a user interacts with a UI component, enabling dynamic behavior.

- Layout Management

Organizing the UI components aesthetically and functionally, often using panels, tabs, or grid layouts.

- Programming Logic

Code that links UI interactions to computational tasks, data processing, or visualization.

Methods to Create MATLAB GUIs

MATLAB offers multiple avenues to develop GUIs catering to different user skills and project complexities:

- GUIDE (Graphical User Interface Development Environment)

Historically MATLAB's primary tool for GUI design, GUIDE provides a drag-and-drop interface.

Pros:

- Visual design simplicity
- Automatic code generation

Cons:

- Deprecated as of MATLAB R2020a
- Limited customization compared to programmatic methods

- Programmatic GUI Creation Using MATLAB Commands

Using MATLAB's built-in functions like ``uifigure``, ``uipanel``, ``uibutton``, etc., developers can craft GUIs programmatically.

Advantages:

- Greater flexibility
- Better control over layout and behavior
- Suitable for complex or dynamic GUIs

- App Designer

The modern, recommended environment for creating professional apps in MATLAB.

Features:

- Drag-and-drop interface
- Rich set of UI components
- Easy integration with MATLAB code
- Supports code editing and customization

Why prefer App Designer?

Starting from MATLAB R2016a, App Designer has become MATLAB's primary tool for GUI development, offering a more intuitive and powerful environment than GUIDE.

Step-by-Step Tutorial: Building a Simple MATLAB GUI using App Designer

Let's explore how to create a basic GUI application that performs a simple mathematical operation?calculating the square of a number.

Step 1: Launch App Designer

- In MATLAB command window, type ``appdesigner`` and press Enter.
- The App Designer interface opens, ready for a new app.

Step 2: Design the Interface

- Drag a Label: Set the text to "Enter a Number:"
- Drag a Numeric Edit Field: To accept user input.
- Drag a Button: Label it "Calculate Square."
- Drag another Label: To display the result.

Arrange these components neatly on the canvas.

Step 3: Define Callbacks

- Select the "Calculate Square" button.
- In the Code View, MATLAB automatically generates a callback function.
- Implement the logic:

```
``matlab

% Button pushed function: CalculateSquareButton

function CalculateSquareButtonPushed(app, event)

num = app.NumericEditField.Value; % Retrieve user input

square = num^2; % Calculation

app.ResultLabel.Text = ['Result: ', num2str(square)]; % Display result

end

``
```

Step 4: Test the App

- Click Run.
- Enter a number and press "Calculate Square."
- The application displays the result instantly.

Step 5: Save and Share

- Save your app with a meaningful name.
- MATLAB creates a `.mlapp`` file, which can be shared or deployed.

Best Practices for MATLAB GUI Development

To ensure your GUI is robust, user-friendly, and maintainable, consider these best practices:

Consistent Layout and Design

- Use alignment tools to ensure components are orderly.
- Maintain uniform font and color schemes.

Clear Labeling

- Label UI components clearly to guide user actions.
- Provide instructions if necessary.

Error Handling

- Validate user inputs.
- Display informative error messages for invalid data.

Modular Code

- Keep callback functions concise.
- Offload complex logic to separate functions.

Responsiveness

- Design GUIs that adapt to window resizing.
- Use ``uigridlayout`` for adaptive layouts.

Advanced Topics: Dynamic GUIs and Data Visualization

Once comfortable with basic GUIs, you can explore:

- Dynamic UI Components: Adding or removing elements based on user input.
- Interactive Plots: Integrating MATLAB plotting within GUIs for real-time visualization.
- Data Export: Allowing users to save results or export graphs.
- Integration with MATLAB Scripts: Linking GUIs with existing computational functions.

Deployment and Sharing of MATLAB GUIs

MATLAB provides avenues to share your GUIs beyond the MATLAB environment:

- Standalone Applications: Using MATLAB Compiler to create executables.
- Web Apps: Deploy via MATLAB Web App Server for browser-based access.
- Sharing `.mlapp`` Files: For users with MATLAB, simply share the app files.

Conclusion

Creating a MATLAB GUI transforms your command-line scripts into interactive, professional applications. Whether you're designing a simple calculator or a complex data visualization tool, MATLAB's suite of GUI development tools—from App Designer to programmatic functions—empowers you to craft interfaces tailored to your needs.

By understanding the core components, following systematic design principles, and leveraging MATLAB's rich features, you can develop GUIs that enhance usability, facilitate data interpretation, and showcase your projects impressively. As MATLAB continues to evolve, mastering GUI development remains a valuable skill that bridges the gap between technical computing and user-centric application design.

Embark on your MATLAB GUI journey today—transform your scripts into engaging, accessible applications that make your work stand out.

Question How do I create a simple GUI in MATLAB using GUIDE? To create a GUI with GUIDE, open MATLAB and type 'guide' in the command window. Use the GUIDE layout editor to drag and drop UI components, then define callbacks in the generated m-file to add functionality. Save your GUI and run it directly from GUIDE or from the command window. What are the basic steps to develop a MATLAB GUI programmatically without GUIDE? Developing a GUI programmatically involves creating uicontrol elements using functions like `uifigure`, `uicontrol`, and `uitextarea`. Define callback functions for user interactions, organize your code in a script or function, and run the script to launch your GUI. MATLAB's App Designer offers a more modern approach for this purpose. How can I pass data between different components in a MATLAB GUI? You can pass data between components by storing shared data in the 'handles' structure using `guidata`. Update 'handles' within callbacks and use `guidata(hObject, handles)` to save changes. Alternatively, use

nested functions or app properties in App Designer for more advanced data sharing. What is the best way to handle button callbacks in MATLAB GUI? Button callbacks are defined as functions associated with uicontrol elements. In GUIDE, double-click the button to generate a callback function. In App Designer, callbacks are linked directly to UI components. Inside these functions, write the code to perform actions when the button is pressed. How can I add plots or images to a MATLAB GUI? Use axes components in your GUI to display plots or images. In the callback functions, use commands like `plot()`, `imshow()`, or `imagesc()` to generate visuals within the axes. Set the 'Parent' property of axes to your UI axes component to embed the visuals. What are some common errors faced when creating MATLAB GUIs and how to fix them? Common errors include incorrect callback functions, data not updating, or UI components not appearing. Fix them by ensuring callback functions are properly linked, using `guidata` to manage shared data, and verifying component properties. Reading MATLAB's error messages carefully and consulting official documentation helps troubleshoot effectively. How do I customize the appearance of my MATLAB GUI components? You can customize components by modifying properties such as 'BackgroundColor', 'FontSize', 'String', and 'Visible'. In GUIDE, select the component and set properties in the Property Inspector. Programmatically, set properties using `set()` commands or directly assign property values in code. Is it better to use App Designer or GUIDE for creating MATLAB GUIs? App Designer is the recommended environment for creating modern, interactive GUIs in MATLAB. It offers a drag-and-drop interface, integrated code editing, and better support for complex apps. GUIDE is deprecated, but still usable for legacy projects. For new development, use App Designer for a more streamlined experience.
