Understanding these priorities helps identify what examiners look for and how students can align their responses accordingly.

Analyzing Key Marking Criteria and Examples

To illustrate the application of the mark scheme, consider typical question types and their expected responses.

Short-Answer Question Example

Question: Describe how the structure of the alveolus relates to its function in gas exchange.

Expected Marking Points:

- Thin walls (one cell thick) to minimize diffusion distance
- Large surface area due to numerous alveoli
- Rich blood supply to maintain concentration gradient
- Presence of moist surfaces for efficient gas diffusion

Sample Mark Scheme Response:

"Alveoli have thin, moist walls to facilitate rapid diffusion of gases, and their large surface area increases the capacity for gas exchange. The extensive capillary network ensures a steady blood supply, maintaining the concentration gradient necessary for efficient oxygen uptake and carbon dioxide removal."

Marking:

- Full marks awarded for mentioning all points with clarity. Partial marks for mentioning some features with brief explanations.

Data-Based Question Example

Question: Interpret the data showing enzyme activity at different pH levels.

Expected Marking Points:

- Identification of optimal pH (peak activity)
- Explanation of enzyme denaturation outside optimal pH
- Understanding of how pH affects enzyme structure and function

Sample Mark Scheme Response:

"Enzyme activity peaks at pH 7, indicating this is the optimal pH. Deviations from this pH reduce activity, likely due to denaturation or conformational changes in the enzyme's active site caused by altered hydrogen bonding."

Marking:

- Full marks for correct interpretation and explanation; partial credit for identifying the optimal pH with a basic explanation.
