Sample Questions from WASSCE 2014 Integrated Science Exam

To illustrate the nature of the 2014 exam questions, here are some representative examples, accompanied by explanations and tips:

1. Multiple Choice Question Example

Question:

Which of the following processes is responsible for the movement of water from the roots to the leaves in a plant?

- A) Transpiration
- B) Photosynthesis
- C) Respiration
- D) Osmosis

Answer: A) Transpiration

Explanation:

Transpiration is the process by which water vapor is lost from the plant's leaves, creating a negative pressure that pulls water upward through the xylem vessels from the roots. Understanding the differences between similar processes like photosynthesis (plant food production) and respiration (energy release) is vital for answering such questions.

Tip:

Memorize key plant processes and their functions to easily identify correct options in multiple-choice questions.

2. Structured Question Example

Question:

- (a) Define the term 'force'.
- (b) State two effects of force on an object.
- (c) An object of mass 10 kg is acted upon by a force of 50 N. Calculate the acceleration produced. (Take $g = 9.8 \text{ m/s}^2$)

Answer:

- (a) Force is a push or pull applied to an object that causes a change in its state of motion or shape.
- (b) Effects include:
 - Change in speed (acceleration or deceleration)
 - Change in direction
 - Deformation of the object (if elastic)

- (c) Using Newton's second law:

$$[F = ma]$$

$$[a = \frac{F}{m} = \frac{50 \text{ N}}{10 \text{ kg}} = 5 \text{ m/s}^2]$$

Tip:

Practice calculations regularly and understand fundamental formulas to quickly solve structured questions.

3. Essay/Long-Answer Question Example

Question:

Explain the process of photosynthesis and mention its importance to plants and animals.

Sample Answer:

Photosynthesis is a process by which green plants, algae, and some bacteria convert light energy into chemical energy stored in glucose. It occurs mainly in the chloroplasts of plant cells, where chlorophyll absorbs sunlight. The general equation for photosynthesis is:

During photosynthesis, carbon dioxide and water are used to produce glucose and oxygen. This process is vital because it provides the primary energy source for all living organisms and maintains atmospheric oxygen levels.

Importance:

- It supplies food and energy for plants and herbivores.
- It contributes to the oxygen supply essential for respiration in animals and humans.

Tip:

When answering essay questions, structure your response with clear introduction, detailed explanation, and conclusion. Use diagrams where necessary to enhance understanding.
