Classification of Viruses

Proper classification of viruses is essential for understanding their biology and developing targeted interventions. Jimma University's virology notes detail the main classification systems and virus taxonomy.

Taxonomic Hierarchy

Viruses are classified based on:

- **Genetic material:** DNA or RNA
- **Capsid structure:** Icosahedral, helical, complex
- **Enveloped vs. non-enveloped**
- **Replication strategy**

Major Virus Families

- Herpesviridae: DNA viruses causing herpes infections

Viral Structure and Components

Understanding virus structure is critical for grasping how viruses infect host cells and how they can be targeted therapeutically. Jimma University notes emphasize key structural features.

Basic Structural Components

- **Capsid:** Protein shell protecting viral nucleic acid
- **Genetic material:** DNA or RNA, single or double-stranded
- **Envelope:** Lipid membrane derived from host cell, present in some viruses

Virus Life Cycle and Replication

The process of viral replication involves multiple steps, each crucial for the propagation of the virus within the host.

Stages of Viral Replication

- **Attachment:** Virus binds to specific receptors on host cell surface
- **Entry:** Penetration into host cell via fusion or endocytosis
- **Uncoating:** Release of viral nucleic acid
- **Replication:** Synthesis of viral components using host machinery
