Sample Business Mathematics Problem and Solution from VK Kapoor

To illustrate the effectiveness of VK Kapoor's solutions, here is a typical problem and its detailed solution:

Problem:

A shopkeeper offers a 10% discount on the marked price of an article. If the selling price after discount is ₹900, find the marked price.

Solution:

- Let the marked price be ₹M.
- Discount offered = 10% of ₹M = $0.10 \times ₹M$.
- Selling price after discount = Marked price - Discount = $₹M - 0.10₹M = 0.90₹M$.
- Given that selling price = ₹900, so:

$$0.90₹M = ₹900.$$

- Solving for ₹M:

$$₹M = ₹900 / 0.90 = ₹1000.$$

Answer: The marked price is ₹1000.
