cisco packet tracer eigrp lab answers

Understanding and mastering EIGRP (Enhanced Interior Gateway Routing Protocol) in Cisco Packet Tracer is essential for students and network professionals aiming to design efficient and scalable networks. EIGRP is a Cisco proprietary routing protocol known for its fast convergence, simplicity, and support for multiple network layer protocols. Lab exercises using Cisco Packet Tracer provide hands-on experience in configuring, troubleshooting, and optimizing EIGRP deployments. This article offers comprehensive answers and guidance for common EIGRP lab scenarios, helping

learners grasp core concepts and practical skills.

Introduction to EIGRP in Cisco Packet Tracer

EIGRP is a hybrid routing protocol that combines the benefits of distance-vector and link-state algorithms. It uses the Diffusing Update Algorithm (DUAL) to ensure rapid convergence and loop-free topology. In Packet Tracer labs, students typically configure EIGRP to connect multiple routers, verify routing tables, and troubleshoot connectivity issues.

Key features of EIGRP:

- Supports multiple network layer protocols (primarily IP).
- Fast convergence due to DUAL.
- Supports unequal cost load balancing.
- Uses hello packets for neighbor discovery and maintenance.
- Maintains a topology table for route calculation.

Common EIGRP Lab Objectives in Cisco Packet Tracer

EIGRP labs generally aim to accomplish the following:

- Configure EIGRP on multiple routers.
- Verify neighbor relationships.
- Examine routing tables to confirm proper route advertisement.
- Troubleshoot common issues like neighbor adjacency failures.
- Implement EIGRP authentication for security.
- Configure redistribution or route filtering as needed.

Basic EIGRP Configuration in Packet Tracer

Step-by-step Guide

- Assign IP addresses to interfaces: Make sure each router's interfaces are configured with appropriate IP addresses and subnet masks.

- Enable EIGRP routing: Use the ``router eigrp [AS number]`` command in global configuration mode.

- Advertise networks: Use the `network [network address] [wildcard mask]` command to specify which interfaces participate in EIGRP.

- Verify neighbor relationships: Use `show ip eigrp neighbors` to see adjacency status.

- Check routing tables: Use `show ip route` to verify routes learned via EIGRP.

Sample Configuration Example

```
```plaintext
```

```
Router(config) router eigrp 100
```

```
Router(config-router) network 192.168.1.0 0.0.0.255
```

```
Router(config-router) network 192.168.2.0 0.0.0.255
```

```
Router(config-router) no shutdown
```

```
```
```

This configuration enables EIGRP on the specified networks within Autonomous System 100.

Common EIGRP Lab Questions and Answers

1. How do you verify EIGRP neighbor adjacency?

Answer:

Use the command:

```
```plaintext
```

```
show ip eigrp neighbors
```

```
```
```

This displays a list of all EIGRP neighbors, including IP addresses, interface IDs, hold times, and uptime. A successful adjacency shows the neighbor's IP and interface details, with a state of "Up."

Troubleshooting tips:

- Ensure IP addresses and subnet masks are correctly configured.
- Check that EIGRP is enabled on the interfaces.
- Verify that hello and hold timers are compatible.
- Confirm that no access control lists (ACLs) are blocking EIGRP packets.

2. How do you verify routes learned via EIGRP?

Answer:

Use:

```
``plaintext
```

```
show ip route eigrp
```

```
...
```

or

```
``plaintext
```

```
show ip route
```

```
...
```

Routes learned via EIGRP are marked with an "D" (for DUAL) in the routing table. Confirm that the expected routes are present and that they originate from the correct neighboring routers.

3. How can you troubleshoot EIGRP adjacency issues?

Answer:

Follow these steps:

- Check interface status: Use `show ip interface brief` to ensure interfaces are up and IP addresses are correct.
- Verify EIGRP configuration: Confirm the `router eigrp` and `network` commands are correctly

configured.

- Check neighbor status: Use `show ip eigrp neighbors`.
- Examine EIGRP hello and hold timers: Mismatched timers can prevent adjacency.
- Ensure no ACLs are blocking EIGRP: EIGRP uses protocol number 88; verify ACLs permit this.
- Check for mismatched EIGRP AS numbers: Both routers must be in the same AS.
- Review interface bandwidth and delay: Sometimes, inconsistent interface settings can hinder adjacency.

Advanced EIGRP Configuration and Troubleshooting

Implementing EIGRP Authentication

Adding authentication enhances security by preventing unauthorized routers from forming adjacencies.

Steps:

- Create a key chain:

```
``plaintext
```

```
Router(config) key chain EIGRP_AUTH
```

```
Router(config-keychain) key 1
```

```
Router(config-keychain-key) key-string cisco123
```

```
```
```

- Configure authentication on interfaces:

```
``plaintext
```

```
Router(config-if) ip authentication mode eigrp 100 md5
```

```
Router(config-if) ip authentication key-chain eigrp 100 EIGRP_AUTH
```

```
```
```

- Verify: Use `show ip eigrp interfaces` to confirm authentication is enabled.

Route Filtering and Route Summarization

- Use distribute-lists to control which routes are advertised.
- Use route summarization to reduce routing table size:

``plaintext

```
Router(config-router) ip summary-address eigrp 100 192.168.0.0 255.255.0.0
```

```

## Common EIGRP Troubleshooting Commands in Packet Tracer

- `show ip protocols`: Displays EIGRP process info and network advertisements.
- `show ip eigrp topology`: Shows the EIGRP topology table.
- `debug eigrp packets`: Monitors EIGRP packet exchanges (use caution in larger networks).
- `ping [neighbor IP]`: Tests connectivity.
- `traceroute [destination IP]`: Diagnoses routing paths.

## Conclusion

Mastering Cisco Packet Tracer EIGRP labs requires understanding both theoretical concepts and practical configurations. The answers and tips provided in this guide serve as a foundation for troubleshooting and optimizing EIGRP deployments. Remember that successful EIGRP implementation hinges on correct network configurations, consistent timer settings, proper interface IP addressing, and security measures like authentication.
